Minimal change disease

Sanjeev Narang

Department of Pathology, Index Medical College Hospital and Research Centre, Indore, Madhya Pradesh, India

- Minimal change disease or nephrosis lipid
On light microscopy, of changes devoid.
- 80% of nephrotics, it does comprise
Boys below 16 years pay the price.
- Idiopathic it is, cause unknown
Possible mechanisms immune have been shown.
- In the net of protein loss, albumin is caught
Label of selective proteinuria, it has got.
- No change grossly it does produce
Shape and size, increase nor reduce.
- Changes in glomeruli and tubules are slight
Noted this is on microscopy light.
- On EM, flat, foot processes of podocytes seen
Labeled as the foot process disease it has been.
- Immunofluorescence - absent deposits does claim
Hence, "nil deposit disease" is also its name.
